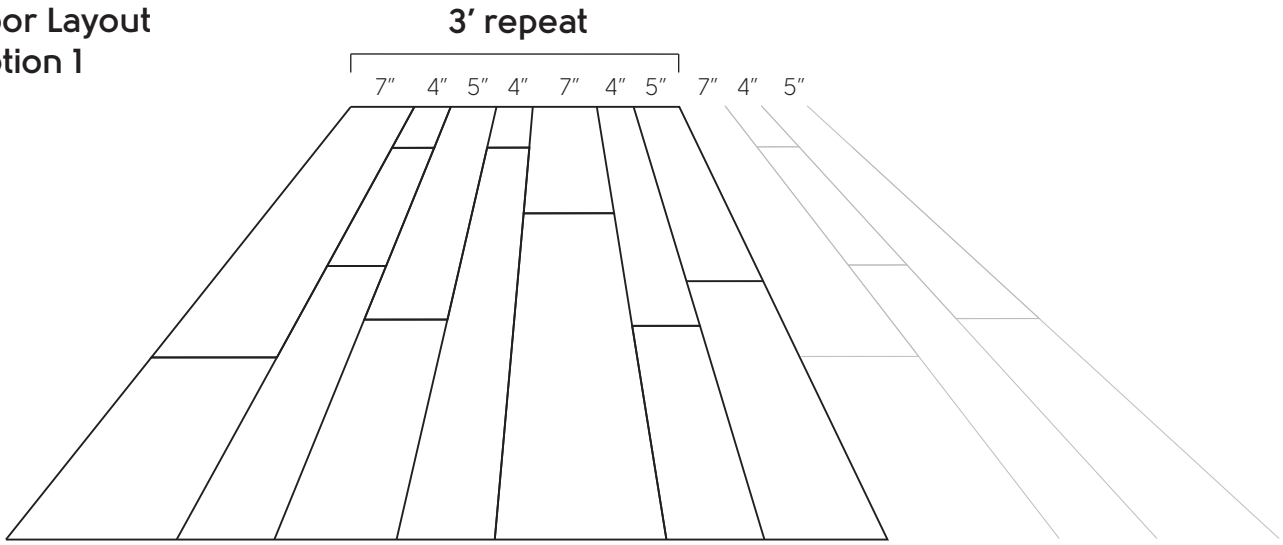
Installation Guidelines
Random Plank

Each box of 24 sq.ft. (2.23 m^2) contains 22 planks in the following quantities:

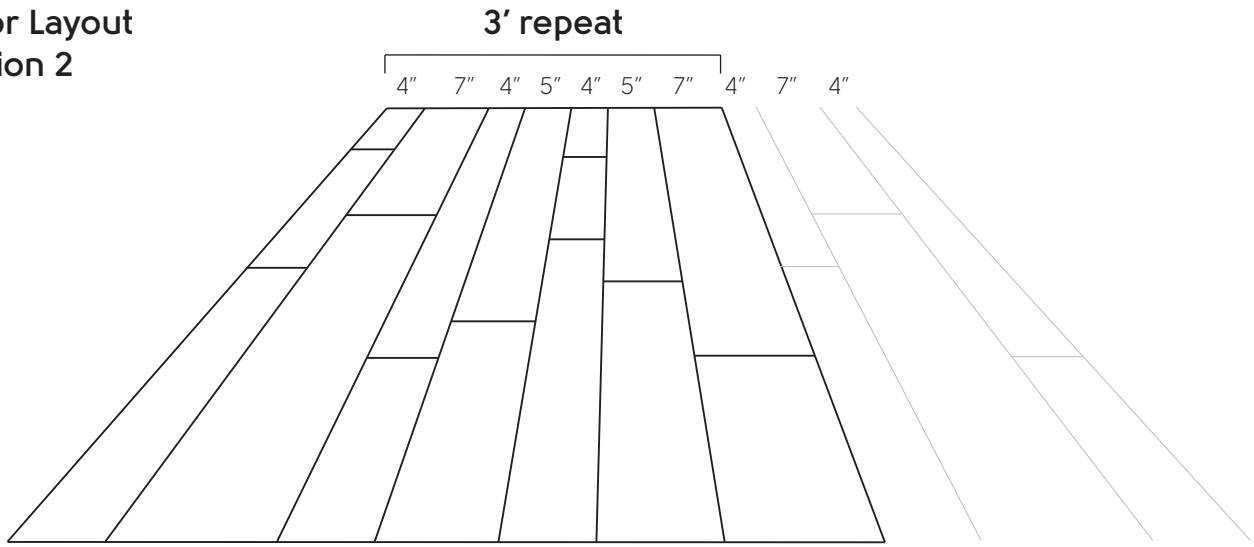
7″ (178 mm) wide	5″ (127 mm) wide	4″ (102 mm) wide
48″ (1219 mm) x2	**48″** (1219 mm) x2	**48″** (1219 mm) x2
30″ (762 mm) x2	**28″** (711 mm) x2	**32″** (812 mm) x2
18″ (457 mm) x2	**20″** (508 mm) x2	**26″** (660 mm) x2
		22″ (559 mm) x2
		16″ (406 mm) x2

The ratio of 7″ to 5″ to 4″ planks is 2:2:3, meaning that when installing the product you should fit 2 rows of 7″ and 5″ planks to 3 rows of 4″ planks, irrespective of the length of the plank run. This 3′ pattern can then be repeated across the room. We recommend you install one box at a time to ensure the 2:2:3 ratio is followed.

Floor Layout Option 1



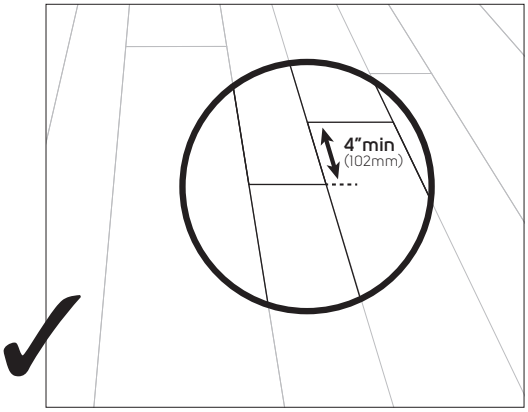
Floor Layout Option 2

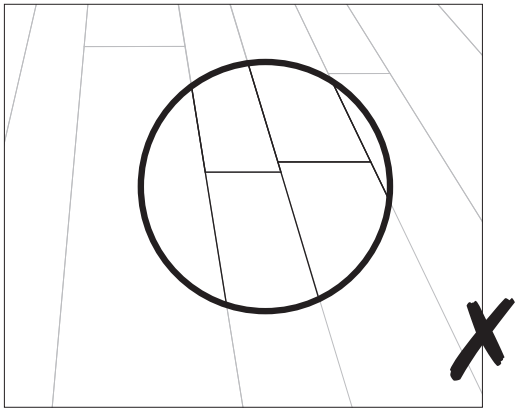


(Please see over for our installation tips)

Tip 1

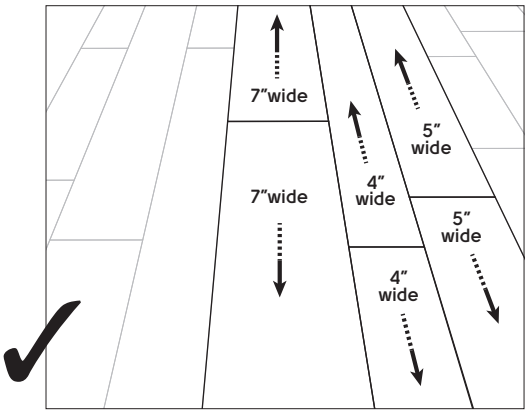
Joins should be a minimum of 4" (102 mm) apart.

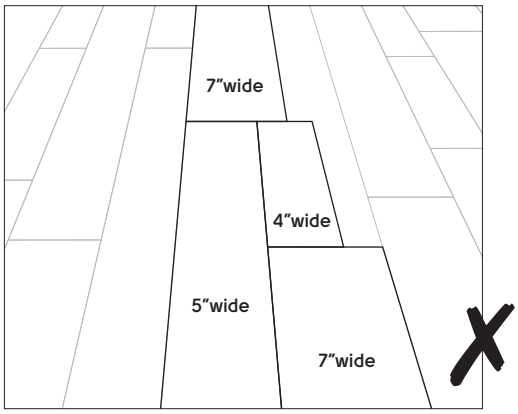




Tip 2

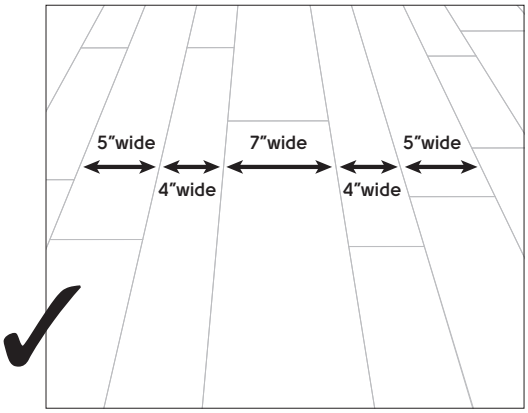
Once a width is started, continue this along the length of the room.

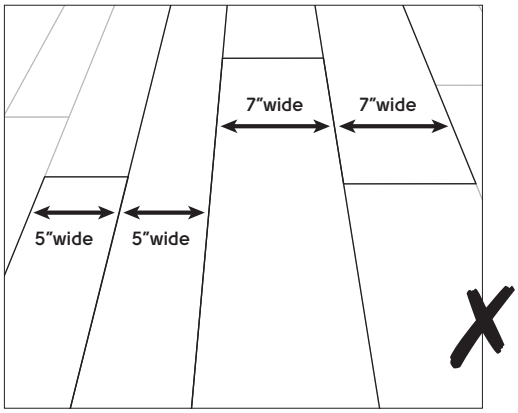




Tip 3

Always lay different planks widths next to each other.





Tip 4

To achieve a truly random effect, do not fit all short lengths or all long lengths together.
This could lead to fitting issues at the end of the installation.
